

Hi Humaniser! Moment

Did You Know?

Your Brain on Autopilot

A small insight about
how the brain works
and why it matters at
work.

*Small habits shape
how teams work
together.*

Pause for Clarity (3-5 minutes)

When to use it

At the start of a meeting or learning session, especially when introducing a behavioural habit or team ritual.

It works best as a short curiosity moment, not a deep discussion.

How it works

- Share the brain insight.
- Invite the team to briefly reflect on where they see it in their work.
- Connect the insight to a small behavioural shift.

Why it helps

When people understand how the brain naturally works, they are more open to adjusting their habits. Bringing awareness turns behaviour change from “should” into “that makes sense.”

Tips

A short insight is often enough to spark reflection.
Let the team notice where it shows up in their day-to-day work.

Did you know?

Your brain runs on autopilot much of the time.

This helps us move fast and handle complexity, but it also means we react before we fully think.

Under pressure, the brain tends to:

- Jump to conclusions
- Rely on assumptions
- Respond emotionally

Small shift

Taking even a short pause helps the brain switch from reaction to reflection.

That's why small habits like Pause for Clarity make such a difference.
